### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance: The claimed subject matter is a computer-mediated process of determining the energy of interaction of a library of peptides to a target protein by determining the interaction energy of each amino acid in each peptide, creating a score matrix using the amino acid prevalence and interaction energy of each amino acid at each position, and determining peptide sequences that meet a binding energy criterion (see the specification at pages 40-42). Some embodiments are drawn to an apparatus that executes the process. The closest prior art is Zhao et al. (Journal of Immunology, Vol. 167, pages 2130-2141 (2001), cited in the Information Disclosure Statement filed 26 June 2006). Zhao et al. constructs a score matrix of binding from analysis of the binding of a library of peptides to a T-cell receptor. Zhao et al. states in the first column of page 2134 that each amino acid is considered to contribute independently and in an additive fashion to the interaction. The score matrix of figure 3 in Zhao et al. shows consideration of only amino acid prevalence, and does not consider the interaction energy of each amino acid. The prior art does not show consideration of interaction energy of each amino acid when choosing peptide sequences that meet a binding energy criterion, as recited in instant independent claim 28, steps (c3), (f3), and (g3), and in equivalent sections in independent claims 32 and 34.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
